Stockholm, August 24th, 1936.

Prof. Joseph A. CUSHMAN,
Brook Road Sharon,
Mass. U.S.A.

Dear Sir:

I am following with the greatest interest all your famous publications of foraminifera. I have here in Sweden in our library nearly all of your papers. Only your work of 1926 in the Bull. Amer. Assoc. Petr. Geol. vol. 10 I can not get here. I would be very happy to have this work, if it is possible for you to send me this paper.

In my paper the Foraminifera from Eriksdal I have some Buliminae and Buliminellae, which have many connections to the samples from your paper of 1935 and 1936 (Some Am. Cretac. Buliminidae and Note on some Cretac. Species of Buliminella and Neobuliminella). Do you have some extra materials from these species? It would be very interesting for me to compare that with my material.

At present I am working on some Foraminifera from the Quadratus layers, which are overlying the Eriksdal formation. In the next time, I intend to work on a Monographie of the foraminifera from the Swedish Danien.

Your very sincerely,

[Signature]

Dr. F. Brotsen
Naturhistoriska Riksmuseets
Paleontologiska Avdelning
Stockholm 50, Sweden

Dear Doctor Brotsen:

Your excellent work on the Cretaceous came while I was away on a vacation and your letter also. I have been very much interested in the paper and the new species of the Cretaceous of Europe. They are in many respects very close to some of ours, perhaps identical. It may be that some of your new names will apply to some of our undescribed forms. I shall study them closely.

For a number of years I have been working for the United States Geological Survey on our American Cretaceous and hope to have published a rather large work on this formation, but it will be sometime yet before it is ready.

I am sending you under separate cover a copy of the 1926 paper which you did not have, and I will have Miss Parker go over our material and send you some specimens of the Sulcidae which you wish for comparison. I shall be glad to send you anything that you may be interested in and would like very much to have specimens for comparison of the new species which you have described if you have anything that you can spare.

With my best wishes, I am,

Sincerely yours,

Jos. A. Cushman
